

Pre - and postharvest factors affecting health-promoting substances and the allergen Mal d 1 in apple fruit

By Anne Matthes

Cuvillier Verlag Jun 2010, 2010. Buch. Book Condition: Neu. 213x147x9 mm. Neuware - The key objective of this work was to evaluate the influence of certain biotic and abiotic factors on the amount of health-promoting substances, such as ascorbic acid and polyphenols and health affecting substances, such as the major apple allergen Mal d 1, in apple fruit. For these studies a high number of different apple cultivars were selected and screened for their amount of bioactive components. Some cultivars were stored for different periods under various conditions. Mechanisms leading to Mal d 1 synthesis during storage have not been unveiled thus far. In this work the effect of 1-MCP, as an ethylene inhibitor, on Mal d 1 synthesis during storage was evaluated. The choose of cultivar, any agronomical practices and proper storage conditions might give the possibility to provide apple fruit with high amounts of health promoting substances and at the same time low amounts of the allergen Mal d 1. The results can be summarized as follows: A high content of polyphenols and antioxidants can be maintained by optimal storage conditions. No differences between cold storage and storage under controlled atmosphere could be detected, whereas shelf life led to...
